SOFTWARE DEVELOPMENT QUOTATION

Custom Food Delivery Marketplace Software

Swiggy / Zomato-Like Online Food Ordering & Delivery Platform

Service Provider: Web Miracle Technology

Registered Location: Kanpur, Uttar Pradesh, India

GSTIN: 09DRMPS1914R1ZT

Website: https://wmtindia.in/

Email: exports@webmiracle.co.in

Contact: +91 7897465555

Project Type: Custom Marketplace Software Development

Estimated Development Timeline: 45–60 Working Days

Total Development Cost: ₹2,50,000 + 18% GST

GST Amount: ₹ 45,000

Total Project Cost: ₹2,95,000

All third-party services, subscriptions, infrastructure, API usage, licenses, and transaction charges will be payable separately by the client.

1. Project Overview

Web Miracle Technology proposes to develop a custom multi-vendor food delivery marketplace inspired by Swiggy and Zomato. The platform will connect customers, restaurants, delivery partners, and administrators through an integrated online ordering and delivery management system.

The software will provide a centralized solution for restaurant onboarding, food menu management, order placement, online payments, delivery assignment, order tracking, commission management, offers, customer support, and business reporting.

The solution will include a customer-facing website, customer mobile application, restaurant management panel, delivery partner mobile application, and a centralized admin dashboard, subject to the agreed platform scope.

2. Customer Application and Website

The customer platform will allow users to discover restaurants, browse menus, place orders, make payments, and track

deliveries.

Features include: Web Miracle Technology

- Customer registration, login, and secure authentication.
- Mobile number verification using OTP through a third-party SMS provider.

- Customer profile and account management.
- GPS-based location detection and delivery address selection.
- Multiple saved delivery addresses.
- Restaurant discovery based on location and service availability.
- Search restaurants by name, cuisine, and food category.
- Filters for ratings, food preferences, availability, and price where configured.
- Restaurant profiles with menus, images, descriptions, ratings, and opening hours.
- Food categories, item variants, add-ons, and customization options.
- Veg and non-veg indicators.
- Food item availability and out-of-stock information.
- Shopping cart and quantity management.
- Special cooking instructions and order notes.
- Automatic calculation of item totals, applicable taxes, delivery fees, and discounts.
- Coupon codes and promotional offers.
- Checkout and order confirmation.
- Online payment and cash-on-delivery options.
- Order status notifications.
- Live delivery tracking, subject to mapping and location service availability.
- Order history and detailed order summaries.
- Reorder functionality.
- Cancellation requests according to configured policies.
- Refund status information.
- Customer ratings and restaurant reviews.
- Customer support and complaint submission.
- Push notifications for order updates and promotional announcements.

3. Restaurant Partner Management Panel

Restaurants will be able to manage their profiles, menus, incoming orders, operating hours, and sales information.

Features include:

- Restaurant registration and onboarding.
- Business details and document submission.
- Admin approval before activation.
- Restaurant profile, logo, images, and descriptions
- Restaurant operating & hours and holiday settings.
- Online/offline availability control.
- Menu categories and food item management.
- Add, edit, and deactivate food products.
- Food descriptions, images, prices, and variants.
- Add-on management and customization options.
- Item availability and stock status.
- Incoming order alerts.
- Accept or reject orders according to configured rules.
- Food preparation time settings
- Order preparation and ready-for-pickup updates.
- Order history and order detail views.
- Configurable restaurant offers and discounts, subject to permissions.

- Sales summaries and order reports.
- Commission deductions and settlement statements.
- Customer ratings and review monitoring.
- Restaurant profile and notification settings.

4. Delivery Partner Mobile Application

The delivery application will help delivery partners receive assignments, collect food orders, and complete deliveries.

Features include:

- Delivery partner registration and login.
- Profile and identity document submission.
- Admin verification and approval.
- Online/offline availability toggle.
- Order assignment notifications.
- Accept or reject delivery assignments according to configured rules.
- Restaurant pickup address and customer delivery address.
- Map-based navigation integration.
- Pickup confirmation and order collection status.
- Order delivery status updates.
- Customer contact functionality, subject to provider support.
- OTP-based delivery confirmation.
- Delivery completion records.
- Delivery history and completed order summaries.
- Earnings and delivery payment summaries.
- Incentive tracking where configured.
- Push notifications for new assignments and order updates.
- Delivery partner profile and account settings.

Advanced route optimization, automated fleet dispatch, and sophisticated delivery batching are not included unless separately approved.

5. Admin Dashboard and Marketplace Management

The admin dashboard will provide centralized control over customers, restaurants, delivery partners, orders, commissions, and platform settings.

Features include:

- Secure admin login and role-based access.
- Dashboard showing orders, sales, customers, and restaurant activity.
- Customer account management.
- Restaurant registration review and approval.
- Restaurant activation, suspension, and account controls.
- Delivery partner verification and management.
- Food categories and cuisine management.
- Menu and listing oversight.
- Centralized order monitoring.

- Order status monitoring and administrative intervention.
- Manual delivery assignment and reassignment.
- Commission percentage configuration.
- Platform service fee settings.
- Delivery charge configuration.
- Minimum order value settings.
- Delivery zones and service area management.
- Coupon and promotional campaign management.
- Refund and cancellation record management.
- Customer complaints and support management.
- Ratings and review moderation
- Payment transaction records.
- Restaurant settlement and payout tracking records.
- Tax and invoice configuration.
- Push notification and announcement management.
- Daily, weekly, and monthly business reports.
- Restaurant-wise sales and performance reports
- Delivery partner performance reports.
- Customer activity and registration reports.
- Basic administrative activity logs.

Actual fund transfers to restaurants and delivery partners will depend on the payment provider and settlement arrangement. Automated split payments or complex payout automation are subject to separate scope approval.

6. Order Processing and Delivery Workflow

The platform will support the following end-to-end order lifecycle:

1. The customer selects a delivery address and browses available restaurants.
2. The customer selects food items and proceeds to checkout.
3. The system calculates the order amount, applicable charges, and discounts.
4. The customer places the order and completes payment or selects cash on delivery.
5. The restaurant receives the order and accepts or rejects it.
6. The restaurant updates the preparation status.
7. A delivery partner is assigned manually by the admin or through the agreed assignment workflow.
8. The delivery partner collects the order and updates the pickup status.
9. The customer receives order status updates and available tracking information.
10. The delivery partner completes delivery using the configured confirmation method.
11. The system records the completed order, payment status, commissions, and relevant reports.

Cancellation, refund, restaurant commission, and delivery fee rules will be configurable according to the approved business requirements.

7. Payment Gateway and Financial Management

The software will support integration with one compatible third-party payment gateway.

Included functionality:

- Online payment initiation.
- Payment success and failure handling.
- Payment status verification through supported gateway APIs.
- Cash-on-delivery order handling.
- Transaction reference and payment history.
- Restaurant commission calculation.
- Delivery fee and platform service fee calculation.
- Coupon and discount calculation.
- Order-wise financial records.
- Refund status tracking.
- Restaurant settlement reports.
- Basic transaction reconciliation reports.

Important: Payment gateway merchant fees, transaction charges, settlement fees, refund charges, and other provider

fees are extra. Automated split settlements, escrow-like workflows, and additional payment gateway integrations are not included in the base quotation.

8. Promotions, Offers, and Customer Retention

- Percentage-based discounts.
- Fixed-amount discount coupons.
- Minimum order value restrictions.
- Coupon validity dates and usage limits.
- Restaurant-specific offers.
- First-order promotions.
- Promotional banners and featured restaurants.
- Push notification campaigns.
- Customer reviews and ratings.
- Basic referral or reward functionality only if included in the final approved scope.

9. Reports and Business Analytics

The admin panel will provide reports to support routine business operations.

- Total orders and order value.
- Completed, pending and cancelled orders.
- Daily, weekly, and monthly sales summaries.
- Restaurant-wise sales reports.
- Commission and platform fee summaries.
- Delivery partner performance reports.
- Payment and refund records.
- Coupon usage summaries.
- Customer registration and activity reports.
- Order status and operational reports.

Advanced business intelligence, predictive analytics, AI recommendations, and custom data warehouse integrations

are excluded from the base scope.

10. Technical Architecture and Security

The final technology stack will be agreed during requirements and architecture planning.

Proposed technical components:

- Frontend: Responsive web application for customer ordering and restaurant management.
- Mobile applications: Cross-platform framework for the agreed Android/iOS scope.
- Backend: Server-side application exposing REST APIs.
- Database: Relational database for customers, restaurants, products, orders, and transactions.
- Authentication: Secure login, access control, and role-based permissions.
- Maps: Google Maps or another supported mapping service.
- Notifications: Firebase Cloud Messaging or an equivalent service.
- Payments: One supported payment gateway.
- Deployment: Client-approved cloud hosting or server infrastructure.
- Standard security and engineering practices:
- Server-side input validation.
- Role-based access restrictions.
- Secure password handling.
- Authentication and authorization controls.
- Protected API endpoints.
- Payment status verification using supported provider mechanisms.
- Error logging and basic application monitoring.
- Database backup configuration, subject to the selected infrastructure.
- Basic deployment and production configuration.

Infrastructure sizing, high availability, disaster recovery, penetration testing, and formal security certifications are not included unless separately specified.

11. Estimated Third-Party Charges and Operating Expenses

The following are indicative planning estimates, not confirmed vendor quotations. Actual charges depend on usage, provider pricing, traffic, location, taxes, and the selected service plan.

A. Cloud hosting and server infrastructure

Estimated cost: ₹3,000–₹10,000 per month for an initial deployment, depending on server specifications, database requirements, storage, and traffic.

Higher traffic, separate production and staging environments, managed databases, backups, load balancing, and redundancy may increase the cost.

B. Domain and SSL

- Domain registration/renewal: approximately ₹800–₹1,800 per year.
- SSL certificate: approximately ₹0–₹6,000+ per year, depending on the selected certificate and provider. Free certificates may be available.

C. SMS and OTP verification

Estimated planning allowance: ₹0.25–₹1.00+ per SMS, depending on the provider, destination, message type, and applicable taxes or regulatory charges.

Indian OTP messaging may require approved sender IDs, templates, and applicable DLT compliance.

D. Maps and location services

Estimated planning allowance: ₹0–₹10,000+ per month for an initial low-to-moderate usage scenario, depending on the provider's free allowances, map loads, geocoding, routes, and usage volume.

Actual Google Maps or equivalent API billing must be checked against the selected provider's current pricing.

E. Payment gateway charges

Indicative planning estimate: approximately 1.5%–3% per successful transaction, potentially plus GST or other applicable fees. Actual rates depend on the gateway, payment method, merchant agreement, refunds, and settlement terms.

F. Push notifications

Firebase Cloud Messaging basic push notification delivery is generally available without a separate per-message delivery fee. Other notification, analytics, or engagement services may incur charges.

G. Email services

Estimated allowance: ₹0–₹3,000+ per month, depending on sending volume, deliverability requirements, and the chosen email provider.

H. App store developer accounts

- Google Play Console: commonly a one-time registration fee of US$25.
- Apple Developer Program: commonly US$100 per year, subject to country, taxes, and current Apple terms.

Account eligibility, fees, and publication approval are controlled by the respective platforms.

I. Monitoring, backups, and other services

Estimated allowance: ₹0–₹5,000+ per month, depending on log retention, monitoring, storage, backup frequency, and selected tools.

Indicative operating budget: A basic deployment may require approximately ₹5,000–₹25,000+ per month, excluding payment gateway transaction fees, marketing, substantial SMS usage, and high-traffic infrastructure. This is a planning

estimate only; actual costs must be validated after selecting providers and forecasting usage. third-party costs are paid directly by the client to the respective providers unless otherwise agreed in writing. The

client is responsible for any applicable taxes, renewals, usage charges, and price changes.

12. Development Cost and GST

The total custom software development fee is ₹2,50,000/-

Applicable GST at 18%: ₹45,000.

Total quotation value including GST: ₹2,95,000/-

The above price covers the agreed development scope described in this quotation. Third-party subscriptions, infrastructure, API usage, payment processing charges, licenses, app store fees, and other external costs are excluded.

13. Development Roadmap

The estimated project duration is 45–60 working days, beginning after advance payment, scope approval, and receipt of the necessary client inputs.

Phase 1: Requirements and UI/UX Design — 7–10 Working Days

- Confirm business workflows and user roles.
- Finalize feature requirements.
- Prepare user journeys and wireframes.
- Design core application screens.
- Obtain client approval.

Phase 2: Backend and Core APIs — 10–12 Working Days

- Database architecture.
- Authentication and user roles.
- Restaurant, menu, and customer APIs.
- Order and payment workflow foundations.
- Admin dashboard foundations.

Phase 3: Customer, Restaurant, and Delivery Modules — 12–15 Working Days

- Customer ordering experience.
- Restaurant management panel.
- Delivery partner workflows.
- Order status management.
- Notifications and location integration.

Phase 4: Admin, Payments, and Business Rules — 8–10 Working Days

- Admin controls and reports.
- Commission and delivery fee rules.
- Payment gateway integration.
- Coupons and promotional settings.
- Financial record management.

Phase 5: Quality Assurance and Deployment — 8–13 Working Days

- Functional and integration testing.
- Bug fixing.
- User acceptance testing.
- Production configuration.
- Deployment and agreed handover.

Some phases may overlap. Third-party approvals, app store review, delayed content, and client feedback may extend the delivery schedule.

14. Payment Terms

Payment Milestone 1 — 40% Advance: applicable GST, payable upon project confirmation.

Payment Milestone 2 — 30% + applicable GST, payable after completion of core development and major modules.

Payment Milestone 3 — 20% + applicable GST, payable after the staging demonstration and testing

Payment Milestone 4 — 10% + applicable GST, payable before final production deployment and source-code handover.

15. Deliverables and Handover

The agreed deliverables will include:

- Customer-facing website.
- Customer mobile application build(s) for the agreed platforms.
- Restaurant management panel.
- Delivery partner mobile application build(s) for the agreed platforms.
- Centralized admin dashboard.
- Backend application and APIs.
- Database schema and configuration.
- One payment gateway integration.
- Agreed maps and notification integrations.
- Testing and deployment assistance.
- Initial administrator account setup.
- Project source code and agreed technical handover after full payment.

Final mobile operating systems, build targets, source-code handover format, and hosting arrangement will be confirmed in the approved statement of work.

16. Support and Maintenance

The quotation includes 30 days of post-deployment bug-fix support for reproducible defects within the approved scope.

The included support does not cover:

- New features or enhancements.
- Changes in third-party APIs or provider policies.
- Hosting outages or infrastructure issues outside the development team's control.

- Problems caused by unauthorized code changes.
- Ongoing server management or 24/7 operational support.
- Third-party service subscriptions and usage fees.

An ongoing maintenance agreement can be quoted separately based on traffic, uptime requirements, support hours, and the required response times.

17. Commercial Terms and Conditions

1. The development fee applies only to the agreed features and deliverables.
2. Major scope changes after approval may require additional charges and revised timelines.
3. Client approval of UI/UX and core workflows is required before implementation proceeds.
4. The client will provide branding assets, restaurant information, legal policies, payment gateway credentials, and other required materials.
5. Third-party services are subject to their own pricing, availability, terms, and limitations.
6. Restaurant payouts and delivery partner payouts depend on the selected payment and settlement arrangements.
7. Production deployment depends on the availability of client-owned hosting, domain, and required third-party accounts.
8. App store submission is subject to platform policies and approval.
9. All outstanding development fees must be paid before final source-code handover.
10. Project ownership and licensing will be governed by the final written agreement and third-party license terms.

18. Project Confirmation

To initiate development, the client must approve the quotation and confirm the required mobile platforms, application branding, delivery workflow, restaurant commission model, payment gateway, and deployment requirements. Development will commence after the scope is finalized and the advance payment is received.
